

CAPABILITIES STATEMENT

TALATEK LLC
COMPLIANCE THROUGH RISK MANAGEMENT

Talk to us. We're problem solvers. TalaTek provides expert services in risk management, security, and compliance. We deliver unparalleled IT security and risk management based on NIST, ITIL, and ISO27001, and specialize in compliance solutions and implementing NIST standards to meet FISMA, HIPAA, privacy standards, and other regulations for our customers.

Corporate clients rely on TalaTek's targeted approach to IT security, loss prevention, and disaster recovery. Thanks to our track record of success at federal agencies, government clients turn to our expertise in risk management, governance, and compliance.

Continuous monitoring and situational awareness help you prepare for future security risks and threats by providing visibility of the thousands of controls and related risks in your environment. We do compliance more efficiently. And when you achieve compliance at a lower cost, you can invest in other security requirements.

TalaTek Approach

TalaTek is a full-service risk management firm offering automated solutions for managing the FISMA process; these include real-time reports, dashboard-like security consoles, and other customized workflow solutions. We're trusted partners, and our expert team, which comes with the highest industry certifications, becomes an extension of your IT security and compliance team.

We deliver solutions that make good IT sense and good business sense. Our expertise is delivered via our TalaTek intelligent Governance and Risk Integrated Solution (TiGRIS), a proprietary, cloud-based application offered as a managed service, that makes our team more efficient and highly scalable and ensures that the quality of our service delivery is consistent and repeatable.

Cloud Security

Cloud service providers can use TalaTek's TiGRIS to cost effectively maintain compliance through risk management while meeting service level agreements.

We offer the needed visibility into common, system-specific, and hybrid controls for continuous monitoring within cloud-based environments. Stakeholders aren't just kept informed; they're provided with actionable, risk-based metrics that allow them to prioritize their expenditure of resources based on business risks.
